

KEY FACTS

WOW Saddles are the world's first truly modular saddle. That means you can select any one of 3 tree shapes in any one of 4 lengths, any one of 21 headplate angles and profiles (V, U, UU) and any one of around 20 panel shapes to fit the horse precisely; then choose from a dozen seat styles and combine with any flap style, set in a choice of 4 angles to suit the rider and their discipline.

WOW Saddles can be adjusted in many ways to ensure the fit keeps pace with a horse's changing shape and the rider's requirements. The headplates offer the widest range of angles on the market, and three different width profiles. There are innumerable girthing options, especially useful where a saddle tends to slide forward or back. The Flair air flocking can be adjusted in seconds while the rider is in the saddle to fine-tune balance or asymmetry. Flaps can be rotated forward or back or even swapped to suit different activities or riders. Three stirrup leather positions optimise the rider's leg position and effectiveness.

The most important aspects of WOW's patented design are the Y-shaped tree, the PPS (Pointless Panel System) and the Flair Air Flocking system. Together these allow the front of the saddle to move laterally with the horse's movement, while the seat (and rider) remain still. The freedom this gives the horse to rotate the scapula and come up in front is extraordinary. The panel design, incorporating PPS (no tree points), has a larger bearing surface than a typical Western saddle, to spread the rider's weight, whilst Flair allows the horse to swing through the back showing more expression.

Saddles are made to order, so can be personalised as required with coloured, patterned or textured leathers, stitch patterns or Swarovski crystals.

Headplates

Flap angles
